# WHO IS SPIDER MURPHY?

Safari Surfboards has been a leader in surfboard innovation and quality since 1963. Spider Murphy started shaping for Safari in 1972 and has become synonymous with the success and growth of the Safari brand. A legend in his own right, Spider is still setting the benchmark in the shaping industry today.

If there was a World Championship for surfboard shapers, Spider Murphy would be a multiple title holder.

In his 45 years of shaping he has personally shaped around 70 000 boards for thousands of surfers the world over including 20 World Champions.

MODEL	70's Fish
DESCRIPTION	A blast from the 70's with a bull nose, full-plan shape, pronounced fish tail, turned down rails going into the nose and hidden volume... the 70's Fish is easy to paddle, easy to surf and covers distance with ease. A real classic when finished with appropriate artwork and a high polish, this board is all about style.
SIZE	5'4 to 7'0
OUTLINE	Full nose classic
TAIL	Fish
CONCAVE	Light single / double
WAVE HEIGHT	Ankle high to overhead

MODEL	Big Fish
DESCRIPTION	Catches waves easily and designed for really small, mushy surf, the Big Fish generates maximum speed over flat sections and when running down the line. Generally 2"-4" shorter than your normal board, it features a wide tail and a light single concave into Vee bottom.
SIZE	6'0 to 7'6
OUTLINE	Semi-wide nose / tail
TAIL	Fish
CONCAVE	Light single / full double
WAVE HEIGHT	Ankle high to overhead

MODEL	Performance Fish
DESCRIPTION	All the features of the Big Fish, but designed with a narrower tail for smaller guys/gals.
SIZE	5'6 to 7'0
OUTLINE	Semi-full nose / tail
TAIL	Fish
CONCAVE	Light single / full double
WAVE HEIGHT	Ankle high to overhead

MODEL STTF

DESCRIPTION The Shaun Tomson Tri Fin blows any conventional fish out of the water. Extra width and thickness in the nose area and a flat rocker gives it plenty of speed in and out of the barrel. Based on the classic shape of the freeride model Shaun rode in the 70's, Spider modernized it by foiling the rails, clipping the tail and adding a thruster fin setup. The STTF works well in the hollowest part of the wave due to the extra width and volume under the front foot, allowing you to get up on the nose without sliding out and skipping in the tube.

SIZE 5'4 to 7'6

OUTLINE Wide up front, pulled in tail

TAIL Rounded pin

CONCAVE Light single / double into Vee

WAVE HEIGHT Ankle high to overhead
